Stainless steel swimming pools and SPA at your home!

The company LEPSOD has been specialising in the manufacture of swimming pools and SPA made of stainless steel for many years. We are a worldwide leader. Our main features are professionalism, experience, and an individual approach to each project, thanks to which our clients can execute their visions. Our company manufactures swimming pools and SPA of standard dimensions, which can be found in our catalogue. We are flexible thanks to which clients can execute their individual projects. We can manufacture swimming pool or SPA of every shape and dimensions, which will meet needs of specific investment. We are also a manufacturer of stainless steel accessories, so we can offer great attractions to suit your needs and comfort. Swimming pools and SPA can be equipped with accessories manufactured by our company, e.g. swimming machines, stainless steel benches with air massage, levelling, lighting or massage nozzles.

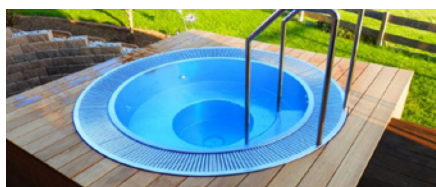

SWIMMING POOLS WITH AN OVERFLOW GUTTER

Swimming pools with an overflow gutter are systems which most often can be seen in public swimming pools, indoor swimming pools, waterparks, or hotels. Such solutions are becoming more common in private houses. The advantage of a swimming pool with an overflow gutter is a unique and beautiful appearance - the water table is on the level of the upper edge of the wall, thanks to which water table of the swimming pool is on the level of the beach. The entire composition makes a perfect visual effect. Additionally, thanks to the overflow system, water treatment is at best level, which allows for effective waste drainage. Impurities in the swimming pool are immediately directed to the overflow gutter, thanks to which they do not reach the bottom and the swimming pool does not require additional cleaning.

SKIMMER SWIMMING POOLS

Skimmer swimming pools are very popular in single-family houses. They are characterised with a simpler system, which does not require the equalisation tank. The wall inflow nozzles direct water to the skimmer, which then directs it to filtration. These swimming pools are economical, and their technology is easily installed.

Round SPA

SPA with hydro massage is a 5-person basin equipped with the entry step, rail, and a round bench, which as the only one on the market has airing system on the whole surface. SPA is equipped with many functions of air and water massages intended for most important body parts. The jacuzzi area has been associated with hotel SPA or public swimming pools only until now. Thanks to contemporary applications, health-oriented bath in a water with bubbles is possible at your home garden.

CUSTOMISED SWIMMING POOLS

We are not afraid of challenges and eagerly perform all great ideas of our clients. We are flexible and have rich experience, thus as one of few we are able to manufacture swimming pools, e.g., with a glass in the bottom or in the wall. We are the only company on the market which manufactures COMPACT swimming pools, which are based on all-in-one and ready-to-use principle - thus, we are able to deliver a swimming pool with a complete technology installed in a special technical room, whilst the swimming pool is stand-alone.

Features of our product:

Quality of workmanship

Our basins are made of best quality stainless steel. Our experience and know-how we have developed over the years allow us to manufacture swimming pools and SPA which meet expectations of most demanding clients. We are proud that we can present best quality products of the LEPSOD brand.

Life time and durability

Stainless steel swimming pools and SPA are mainly characterised with exceptional resistance to damages. In addition, our products do not age (they do not distort or discolour) and the pool looks as good as new after decades.

Hygiene

Stainless steel basins are usually installed in public swimming pools due to best hygiene performance. Basins have smooth walls thanks to which the risk of water organisms development is limited. Stainless steel swimming pools are easily cleaned.

Easy installation

It is usually possible to transport stainless steel swimming pools as a whole product, thus we save time. In the event of larger dimensions, the swimming pool is transported in modules and welded at the investment site.

Stainless steel swimming pools and SPA are ECO.

Stainless steel is environmentally friendly and can be recycled.

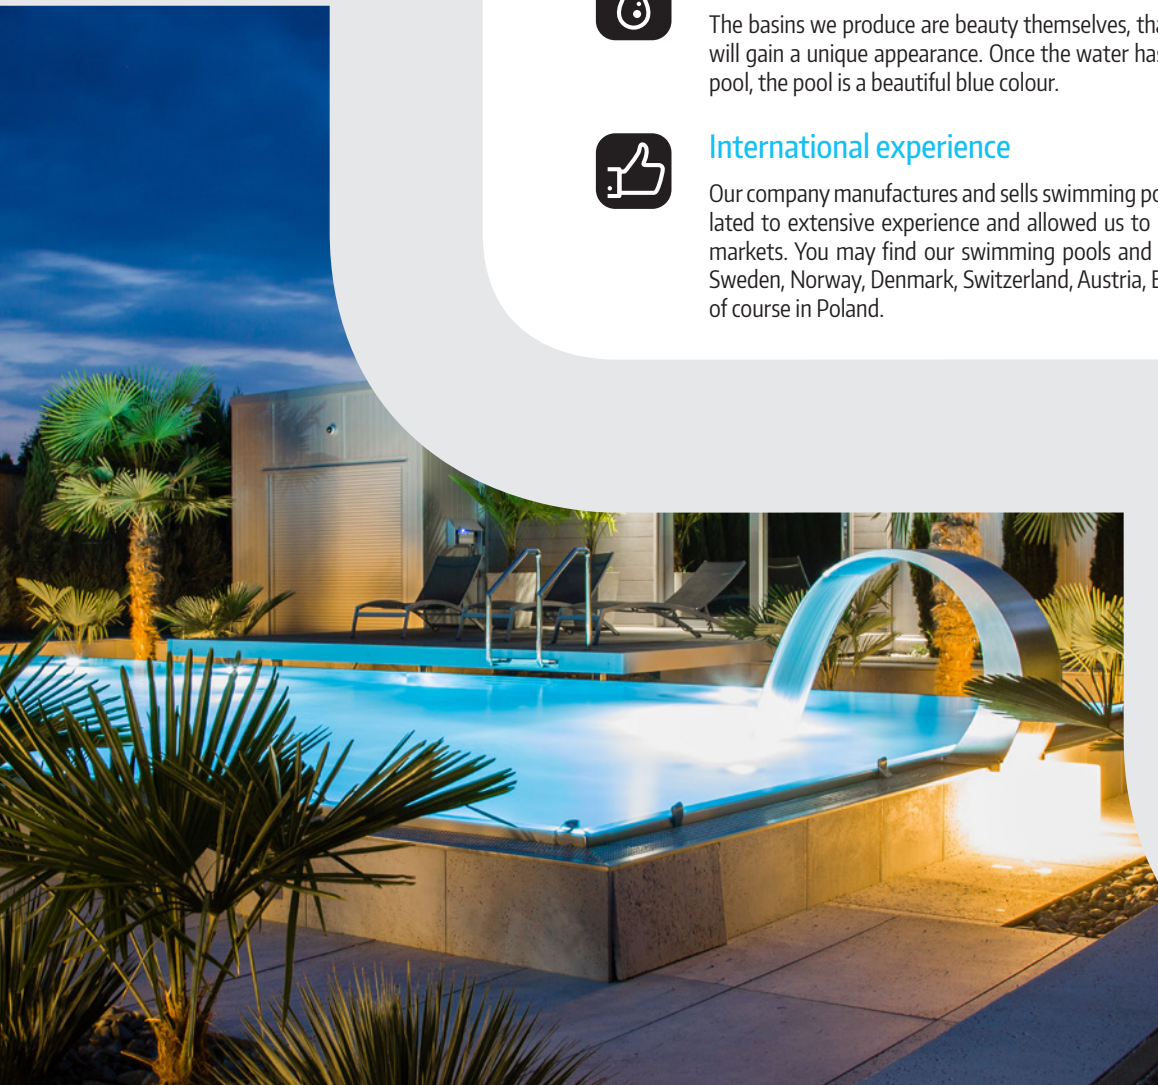

Beauty and aesthetics

The basins we produce are beauty themselves, thanks to which your garden or room will gain a unique appearance. Once the water has been filled into the stainless steel pool, the pool is a beautiful blue colour.

International experience

Our company manufactures and sells swimming pools to many countries, which translated to extensive experience and allowed us to learn the specific nature of various markets. You may find our swimming pools and SPA, amongst others, in Germany, Sweden, Norway, Denmark, Switzerland, Austria, England, Israel, the USA, Russia, and of course in Poland.
